EXECUTIVE SUMMARY

Software engineer with 4 years of experience at one of the world's largest network services providers. Led teams on multiple projects delivering reliable systems across the full software development lifecycle. Completed B.S. and M.S. in Computer Science in 4 years with Latin honors and a focus in data science and artificial intelligence.

PROFESSIONAL EXPERIENCE

Fujitsu

Software Development Engineer III

Richardson, Texas

January 2025 – June 2026

- Advanced AI research and development through targeted POCs, driving company-wide adoption of the Windsurf Skills Tool, Agentic Coding, and MCP integrations across Bitbucket, Confluence, Jira, and Jenkins CI/CD pipelines.
- Scaled Transponder product topologies by leading a team of 10 engineers in eliminating hardware memory constraints through OpenSlice's Distributed Data System, leveraging Windsurf and advanced prompt engineering to modernize and refactor over 1 million lines of platform data representations.
- Improved customer insight into traffic-carrying capacity and network utilization through successful transponder deployments with AT&T and Uber by architecting a real-time operational-status feature for all supported fiber-optic transport interfaces.
- Built a scalable, production-grade AWS monitoring platform that delivered real-time visibility into Transponder hardware health and resource utilization. Developed reusable CloudFormation templates to enable rapid, consistent infrastructure deployment across multiple engineering teams.

Fujitsu

Software Development Engineer II

Richardson, Texas

August 2022 – January 2025

- Advanced FIPS 140-3 certification readiness for Fujitsu flagship products working with platform, hardware, open-source, and government compliance teams, and directly led 4 engineers to architect compliant cyber security capabilities across platform and control-plane layers.
- Reduced downstream defects by 30% as measured by Horizontal Integration Testing, by building Jenkins and GitLab CI/CD pipelines with custom smoke, sanity, and platform-specific test suites.
- Doubled control-layer and platform software test coverage by automating tests with the open-source Robot Framework, which led to uncovering a critical edge-case bug that could have caused system-wide failure.
- Strengthened software lifecycle planning for projects longer than 6 months by creating roadmaps, risk-mitigation strategies, and contingency plans reviewed directly with the Head of Global Development, leading to on-time deployments of multiple projects.

SKILLS

AI/ML & Data Science: Python, Pandas, LangChain, LangGraph, RAG Architecture, Prompt Engineering, MCPs

Cloud: AWS (S3, EC2, Lambda, RDS, VPC, IAM, DynamoDB, CloudFormation), Terraform, Docker

CI / CD: Jenkins (SonarQube, Kubernetes, Docker, BlueOcean), GitLab

Software Development: Python, Javascript, C++, REST APIs, Unit Testing, Vertical Integration Testing

Artifact Tracking: Jira, Aha!, GoldMine, Confluence, Enovia, Bitbucket, Git, Stash

Dev Environment and Tools: Cursor, Windsurf, Copilot, QEMU, Linux (SCP), VS Code

EDUCATION AND CERTIFICATIONS

The University of Texas at Dallas, Erik Jonsson School of Engineering

Richardson, Texas

M.S. in Computer Science, Specialization in Data Science / Artificial Intelligence

Graduation: August 2022

B.S. in Computer Science

Graduation: May 2021

Honors/Awards: Academic Excellence Scholar, Magna Cum Laude

AWS Solutions Architect Associate Certificate

Issued: July 2026
